

MEETING NOTES

Grocery Shopping and Flavor Substitutes Discussion

Participants: Cash, Che, Ziggy Primary topics — Bread purchasing habits,

Contents

Executive Summary

Key Decisions and Direction

Closing Assessment

Discussion covered dietary adjustments regarding bread purchases and exploring non-soapy alternatives for cilantro flavor.

Cilantro substitutes, Taste perception changes due to medication/genetics

Executive Summary

The discussion began with a review of grocery expenses and dietary choices, leading **Che** to decide on switching from croissants to Baps for better value and dental health. This naturally transitioned into a detailed conversation about flavor profiles, specifically addressing the soapy taste associated with cilantro. **Ziggy** provided extensive scientific advice regarding how different preparations (dehydrating vs. freezing) affect herbs like cilantro and suggested several viable substitutes such as flat leaf parsley or Thai basil. Furthermore, **Ziggy** educated **Che** on potential causes of altered tastes, linking them to genetics (the OR682 gene) and various medications.

Key Decisions and Direction

1. **Che** decided to buy baps from now on instead of relying solely on croissants due to cost and teeth concerns.
 2. **Che** decided to start making their own whole grain bread slices using gluten-free recipes.
-

Closing Assessment

The meeting successfully navigated both practical household budgeting decisions and complex biochemical discussions regarding flavor profiles, providing **Che** with actionable knowledge on dietary swaps and herb substitutes.
